# POSTERWALK

Digital Renaissance of Scientific Paper Poster

„Scientific paper posters should be replaced by a digital successor as soon as possible"!

**We agree. Partly.**

# Does digital now beat analogue? Yes. But why not combining best of both worlds?

**Posterwalk** is a stand-alone ePoster system: no tables, no walls, no constructions are necessary. Clear view at the ePoster during poster presentations thanks to a 90 deg. free swiveling control arm. A scientific poster has always been large and so our 60 inch FullHD poster displays are as large as the familiar paper posters. Conference posters in landscape- or portrait mode? You're welcome! We invented **Posterwalk** as the digital successor of the „good old" paper poster, enriched with all digital benefits of today.

Spare your old paper poster boards and halls plus save precious space and money for more important purposes for your conference (e.g. a bigger exhibition or more lecture halls). Our approved and certified stainless steel stands can be positioned anywhere thanks to their flexibility and their functional design. Requirements? Only a power socket and WiFi. That's all.

Main benefits of our **Posterwalk** app: poster overview, send posters via e-mail, detailed poster view, video implementation, zoom & pinch to zoom, swipe, laser pointer function for discussions, get in touch with the author, full-text search, separate poster categories, discussion timer, online poster submission- and administration, valuable post-conference statistics and an intuitive usage on an Apple© iPad©.

## Only a power socket and WiFi. That's all.

„The paper poster was obviously your role model. For me, **Posterwalk** is like the familiar paper poster, transferred into modern age for people like you and me"!

Ramona D. Bredlow,
M.D. – Chicago

**Posterwalk** preserves the advantages of scientific paper posters and leads them - as the last analogue conference media - into the digital conference age and provides them with new features and innovations: upload your posters online prior to the congress easily and quickly in the „good old" and familiar standard size and ratio.

Present posters state-of-the-art on-site by using e.g. an integrated laser pointer function or an integrated PA discussion system on large 60 inch screens (approx. 155cm), using an Apple© iPad© with its integrated gestures' functions.

**Still on paper but open for ePosters?**

Combine **Posterwalk** with your already sketched paper poster area for a first step into digital!

„The poster submission was easy ...

... so simple and so fast"
Carlos G. Nunes,
M.D. – Lisbon
